CORGI SPRINT™

The Corgi Sprint wheelchair has a superior level of comfort for the user with its independent suspension system. The seat unit is also removable so that it can transfer onto one of the Corgi Powered bases.

This is particularly useful for users who appear to have driving potential as they can try out driving without any change to their seating position.

This normally results in higher success rates, and if they prefer to drive most of the time, they can still have the manual backup of a Corgi Sprint Base Unit.

Robust Seating

Crash Tested

Compact Tilting Base

Large Growth Range

Family Friendly

The Corgi System offers a comprehensive range of postural support accessories

User Weight	45kg	55kg	65kg

CORGI POWER BASIC

The Corgi Power Basic is our entry level powered wheelchair with height and angle adjustable seating position. The Corgi profiled seating and support are included in the cost, and the seat is removable and transferable onto the manual Sprint base. A range of controllers from both Dynamic and PG Drives are available, with access to programming if required.

We originally designed the Corgi Power to overcome problems with stability. Most other kids powered wheelchairs are derived from adult products, resulting in a higher seat position and centre of gravity. The Corgi Power has its battery pack placed very low to the ground, combined with the 60cm wide wheelbase to give sideways stability.

CORGI MEGATILT

The Corgi Megatilt offers 40 degrees of rearwards tilt – useful for correct positioning after hoisted transfers as well as catering for those laid back moments.

The Smart tilt mechanism keeps the centre of gravity over the wheelbase when in the fully tilted position.

CORGI Hi-Lo

Designed for those 'hard to reach' places, the Corgi Power Hi-Lo gives an impressive seat raise which overcomes many access issues in mainstream schooling.

This feature is sometimes part funded by Education Authorities, resulting in excellent use of financial resources.
